

# GF65 to PTM65 Conversion: PTM65 release library

---

- The available TAR files contain the POSH PTM65 circuits release library (which contains the PTM65 device symbols for use in schematics).
- It references ideal resistors and capacitors from the Cadence distribution library that is created when Cadence is installed.
- The PTM model deck library is also attached.
- Users will have to setup their simulation environment in ADE to reference the models in this library with the correct path on their particular simulation machines.
- This library does not have **\*any\*** GF65 schematics nor does it instantiate any GF65 devices.
- All files have user "**caduser**" with group "**users**".
